

Distribution of county winter temperatures by period

Source: PRISM; all complete county-winters. Black bars mark medians; violin width shows density. County-winters per period — 1980s: n=24,864; 1990s: n=31,080; 2000s: n=31,080; 2010s: n=31,080; 2020-2025: n=18,648. Periods contain unequal numbers of winters; the spread is dominated by persistent geography, so see the county-demeaned exhibit for the temporal shift.
