

Within-county winter temperatures have shifted warmer

Source: PRISM; all complete county-winters, each expressed as a deviation from its own county's full-sample mean. Removing persistent geography isolates the temporal shift. County-winters per period — 1980s: n=24,864; 1990s: n=31,080; 2000s: n=31,080; 2010s: n=31,080; 2020-2025: n=18,648.
